## **DETAILED ACTION**

### ***Terminal Disclaimer***

1. The terminal disclaimer filed on November 08, 2007 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of Patent No. 6,738,034 has been reviewed and is accepted. The terminal disclaimer has been recorded.

### ***Allowable Subject Matter***

2. Claims 3-7 allowed.

The following is a statement of reasons for the indication of allowable subject matter. The present invention related to a matrix organic light emitting diode display wherein pixels of the display are initial driven in a light emitting portion of a frame period and then introducing a light quenching period within each frame period within each frame period. Each independent claim identifies the unique distinct feature:

As per claim 3,

"the organic light emitting diode is caused to be quenched for a subsequent remaining portion of the frame period following the light emitting portion, by feeding scanning signals to the plurality of gate line as well as picture image signals to the plurality of data lines after feeding scanning signals to the plurality of gate lines for displaying one picture image."

In reference to claim 4,

Art Unit: 2629

“ the organic light emitting diodes are caused to be quenched for a subsequent remaining portion of the frame period following the light emitting portion, by feeding scanning signals to the plurality of gate lines as well as feeding picture image signals for quenching the organic light emitting diodes to the plurality of data lines in synchronism with the scanning signal after feeding the scanning signals to the plurality of gate lines and causing the organic light emitting diode light emission for displaying one picture image, thereby a blurred edge of a motion picture image is prevented.”

With regard to claim 5,

“the organic light emitting diodes are caused to be quenched for a subsequent remaining portion of the frame period following the light emitting portion, in one frame period for displaying one picture image, and wherein the light quenching period scanning signals are fed to the plurality of gate lines and the picture image signals for quenching the organic light emitting diodes are fed to the plurality of data lines in synchronism with the scanning signals.”

In reference to claim 6,

“the organic light emitting diodes are caused to be quenched for a subsequent remaining portion of the frame period following the light emitting portion, in one frame period for displaying one picture image, and feeds scanning signals to the plurality of gate lines as well as picture image signals for quenching the organic light emitting diodes to the plurality of data lines in synchronism with the scanning signals in the light quenching period.”

Regarding claim 7,

“the organic light emitting diodes are caused to be quenched for a subsequent remaining portion of the frame period following the light emitting portion, for one frame period for displaying one picture image and another frame period for displaying subsequent one picture image, and scanning signals are fed to the plurality of gate lines as well as picture image signals for quenching the organic light emitting diodes are fed to the plurality of data lines in synchronism with the scanning signals in the light quenching period.”

3. The closest arts of Harada et al. (U.S Patent No. 4,886,775) and Sekiya et al. (U.S Patent No. 6,583,775) shows similar LED display which also introducing an erasing period, quenching period, after the light emitting portion in a frame period, but either in singularly or in combination fails to anticipate or render.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

### ***Conclusion***
